# SAFE MANAGEMENT OF BLOOD AND BODY FLUID SPILLAGES

# SAFE MANAGEMENT OF BLOOD AND BODY FLUID SPILLAGES

## 1. Introduction

This Policy is one of the 'Standard infection control precautions' (SICPs) referred to by NHS England in the *National infection prevention and control manual (NIPCM) for England*.

Blood and body fluids, e.g. urine and faeces, may contain a large number of microorganisms, such as bacteria and viruses.

Staff who may have contact with blood or blood stained body fluids, or are exposed to sharps or other inoculation risks, should have had the opportunity for hepatitis B vaccination and antibody testing to check for their response.

Contamination or spillages with blood or body fluids should be dealt with immediately, as this may expose staff and others to infection. Blood and body fluid spillages should be managed by staff trained in the correct procedure.

Always use standard SICPs and, where required, 'Transmission based precautions' (TBPs), refer to the 'SICPs and TBPs Policy for General Practice'.

**When caring for patients in relation to any new or emerging infection, staff should refer to the latest national infection prevention and control guidance.**

GP Practices should ensure regular audits to monitor compliance with the Policy are undertaken to provide assurance.

## 2. Dealing with blood and body fluid spillages

Clean up blood and body fluids promptly to reduce the risk of infection to other people.

Appropriate personal protective equipment (PPE) should be worn and standard infection control precautions followed.

**Best practice is to use a spillage kit appropriate to the type of spillage, e.g. blood/blood stained body fluids or non-blood body fluids, which should be used following the manufacturer's guidance and within its expiry date.**

Spillage kits may contain solidifying polymer granules. A National Patient Safety Alert issued in 2017, following a number of deaths and incidents related to

patients ingesting the product, advises a risk assessment and procedures in place to ensure supplies are securely stored away from the general public.

- If the spillage kit is unsuitable for use on soft furnishings, untreated wood and carpets, clean the surface using a general purpose neutral detergent and warm water, a carpet shampoo machine or steam cleaner.
- If soft furnishings or other items are heavily contaminated with blood or body fluids that cannot be adequately decontaminated, they should be disposed of appropriately.
- Dispose of waste and PPE in the relevant waste stream, refer to the 'Safe disposal of waste, including sharps Policy for General Practice'.
- Wash hands with liquid soap and warm running water.
- If a mop and bucket are used, they should be in accordance with the national colour coding, refer to the 'Safe management of the care environment Policy for General Practice'. After use, the mop head should be disposed of immediately as clinical infectious waste and the bucket disinfected appropriately, cleaned and stored upside down to air dry.
- All cloths used must be single use and disposed of after use.

### 3. Splashes of blood or body fluids

- Splashes of blood or body fluids to the eyes, nose or mouth must be treated as potential exposure to a blood-borne virus, refer to the 'BBVs Policy for General Practice'.
- For appropriate management of percutaneous exposures (sharps/splash injuries), refer to the 'Safe management of sharps and inoculation injuries Policy for General Practice'.

### 4. Infection Prevention and Control resources, education and training

The Community IPC Team have produced a wide range of innovative educational and IPC resources designed to assist your General Practice in achieving compliance with the *Health and Social Care Act 2008: code of practice on the prevention and control of infection and related guidance* and CQC registration requirements.

These resources are either free to download from the website or available at a minimal cost covering administration and printing:

- 27 IPC Policy documents for General Practice
- Preventing Infection Workbook: Guidance for General Practice
- IPC CQC inspection preparation Pack for General Practice

- IPC audit tools, posters, leaflets and factsheets
- IPC Bulletin for General Practice Staff

In addition, we hold educational study events in North Yorkshire.

Further information on these high quality evidence-based resources is available at [www.infectionpreventioncontrol.co.uk](http://www.infectionpreventioncontrol.co.uk).
