

Pressure relieving cushion and cover compliance: Monthly Audit Tool for Care Homes

This Audit Tool aims to identify pressure relieving cushions and covers in poor condition. Cushions and covers in a poor condition are known to be a source of healthcare associated infection.

Action

- Each pressure relieving cushion and cover should be reviewed on a regular basis, which should be based upon a local risk assessment, e.g. monthly. Complete sections 1 and 2 below for each pressure relieving cushion cover and cushion.
- Cushions should be enclosed in a waterproof cover, preferably with an integral zip fastener, to facilitate inspections of the surfaces.
- For audit purposes, all cushion covers should be numbered for identification, rather than identifying the cushion by the location, as cushions are often moved between locations.
- In the event of cushion or cover failure, action plans must be drawn up locally, reviewed and monitored.
- Completed audit tools should be kept locally for good practice assurance and as evidence for CQC inspections.
