

PVL-SA

Octenisan and Bactroban suppression treatment Instructions for service users in the community

Panton-Valentine Leukocidin *Staphylococcus aureus* (PVL-SA) suppression treatment helps to reduce the numbers of PVL-SA bacteria a person has or may carry. This treatment reduces the chances of developing a new PVL-SA infection.

This information aims to assist you to use PVL-SA suppression treatment correctly. The treatment is a combination of **two separate treatments** to be used over a 5 day period. It is important that you complete the 5 day course to reduce the possibility of developing a further PVL-SA infection. Both treatments should be started on the same day. If close contacts have also been prescribed treatment, it is important that everyone starts their treatment on the same day.

If severe irritation occurs with any of the products, discontinue use and contact your GP for further advice.

Octenisan antimicrobial wash lotion (step-by-step guide on the back of this sheet)

Octenisan antimicrobial wash lotion is effective at destroying the bacteria that cause PVL-SA infections and should be used for both whole body and hair washing.

- After showering with your normal skin products, apply Octenisan undiluted to the whole body and leave for the recommended contact time of 1 minute before rinsing off thoroughly.
- You will need to shower or strip wash **once** daily for 5 days using the wash lotion.
- Use the wash lotion as a hair shampoo on day 2 and day 4. Hair conditioner can still be used after using the Octenisan wash lotion. You can wash your hair as normal on the other days during the treatment.
- If you require assistance with this treatment, please discuss with your GP.

Bactroban nasal ointment (step-by-step guide on the back of this sheet)

- It is important to wash your hands with liquid soap and warm running water before and after applying the ointment.
- For both nostrils, place a small amount of the ointment about the size of a match head on your little finger and apply to the inside of each nostril three times a day for five days.
- Pinch the nostrils lightly together after applying the ointment to help spread it.
- Discard any remaining product at the end of the 5 days of treatment.

Bactroban nasal ointment step-by-step guide

A nasal ointment called Bactroban which should be used **three times a day for 5 days.**

<p>1. Wash and dry your hands.</p>	<p>2. Unscrew the cap and squeeze a small amount of ointment, about the size of a match head onto your little finger.</p>	<p>3. Apply ointment to the inside of one nostril.</p>	<p>4. Repeat steps 2 and 3 for the other nostril.</p>	<p>5. Close your nostrils by pressing the sides of the nose together for a moment. This will spread the ointment inside each nostril.</p>	<p>6. Wash and dry your hands. Then replace the cap on the tube.</p>
